

Installing Symantec Antivirus

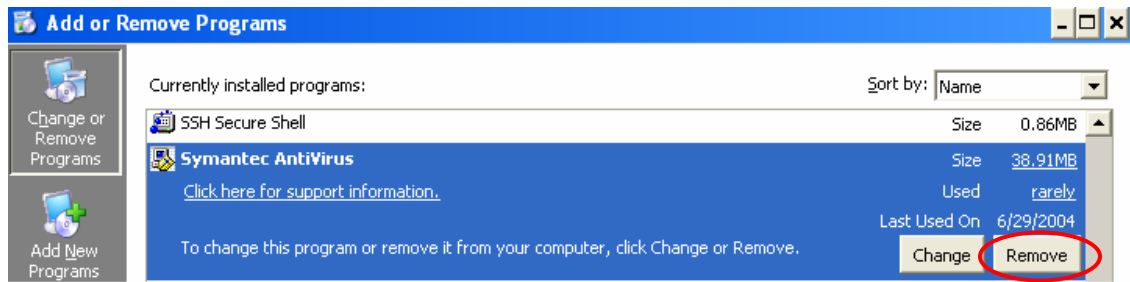

All operations described below require that you are logged in as Administrator or that your account has Administrative Privileges.

The Office of Information Technology has negotiated a contract with Symantec for the distribution of the Symantec Antivirus Program.

Installing the Symantec Antivirus Client in Windows 98/2000/XP

1. Uninstall the antivirus software currently installed on your PC, including Pc-Cillin, McAfee, Symantec AntiVirus 2003 or any other Symantec commercial version and the corresponding versions of LiveUpdate.
2. If there is no antivirus client installed, then you may proceed directly to the installation instructions below at step 4.
3. To uninstall any antivirus software, just go to **Start | Control Panel | Add or Remove Programs**, select the antivirus software program and press "Remove". It is necessary to reboot your computer after the uninstall process has completed.

Installation Instructions

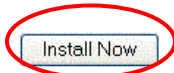

4. Go to the website listed below and login using your **webID** user and password https://secure.olemiss.edu/webid_stu/index.jsp
5. Click the **Install Now** button to begin the installation process.

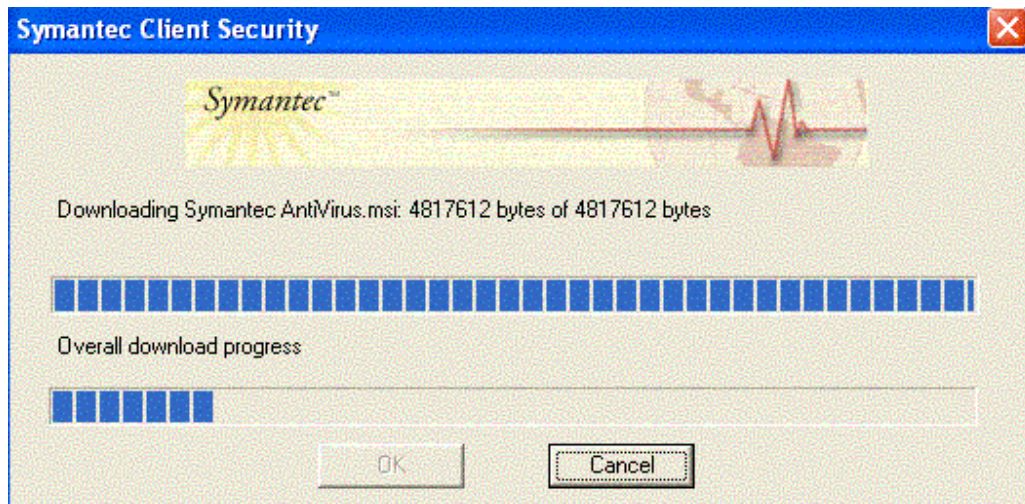

Installing applications

This program downloads and installs applications. You must use Internet Explorer version 4.0 or higher. If you need assistance, contact your system administrator or help desk staff.

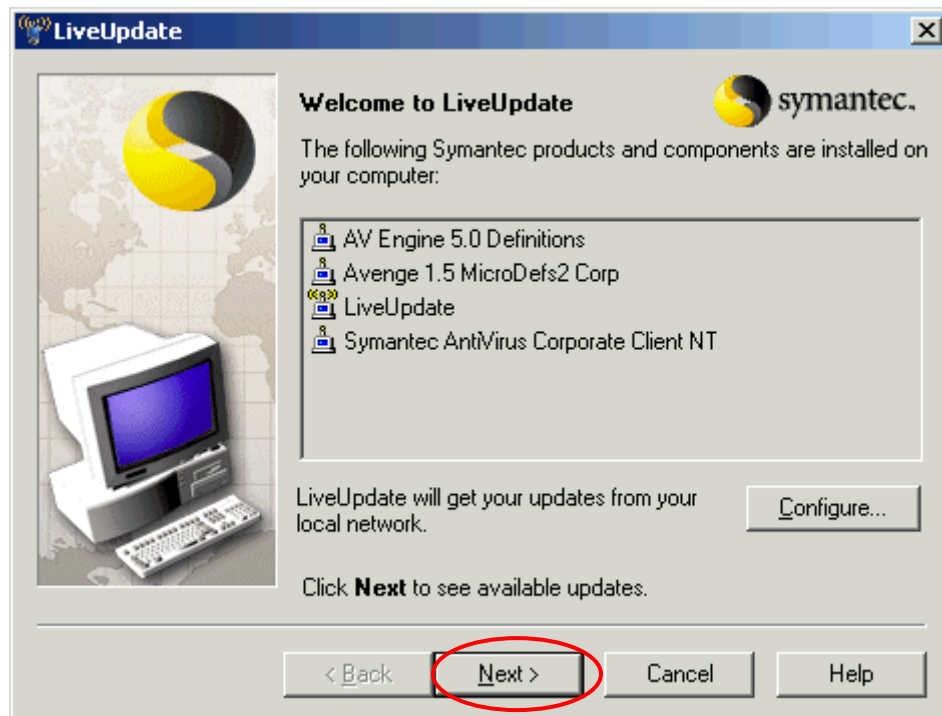

Click the **Install Now** button below to download and install applications.

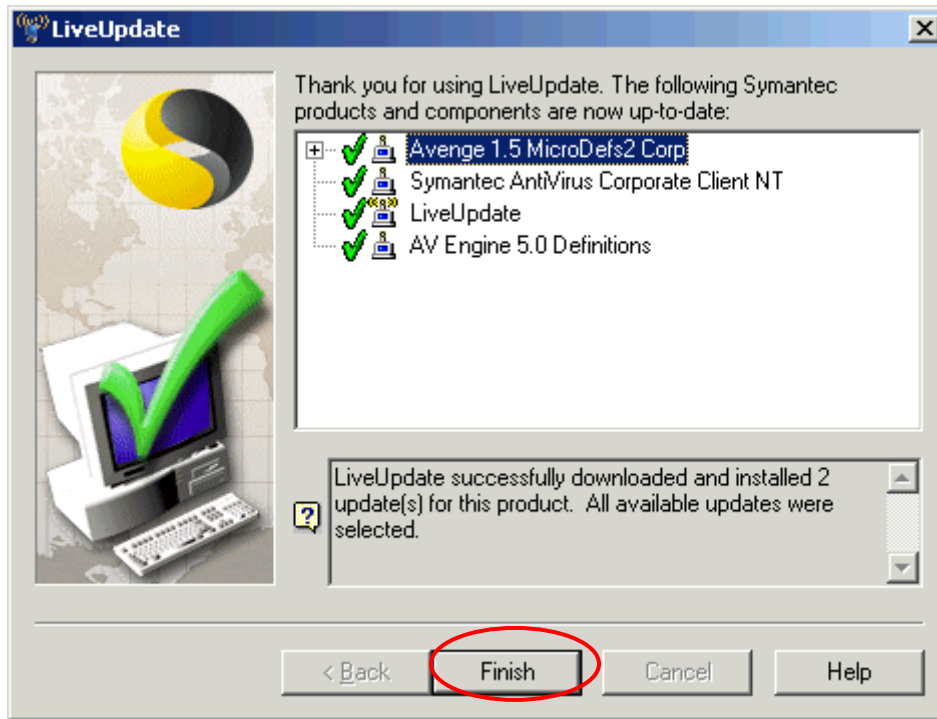

6. The screen below will appear indicating the progress of download and installation.

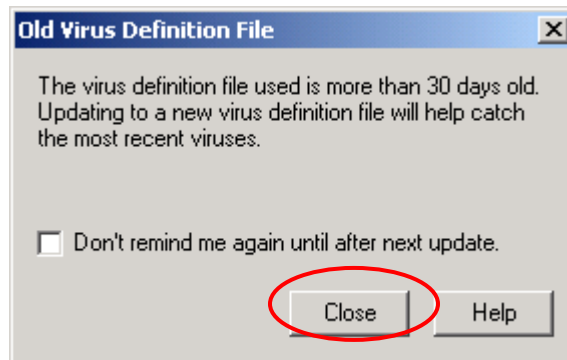

7. When the Welcome to **LiveUpdate** screen is displayed, click **Next** to download the latest virus definitions.

8. Click **Finish**.

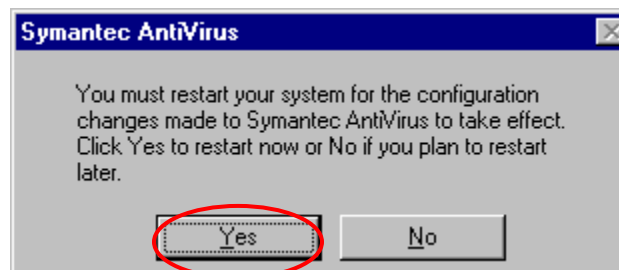

9. If an Old Virus Definition File message is displayed, click **Close** to close the dialog box. Then restart the computer.

10. You have successfully installed Symantec Corporate Antivirus on your computer.

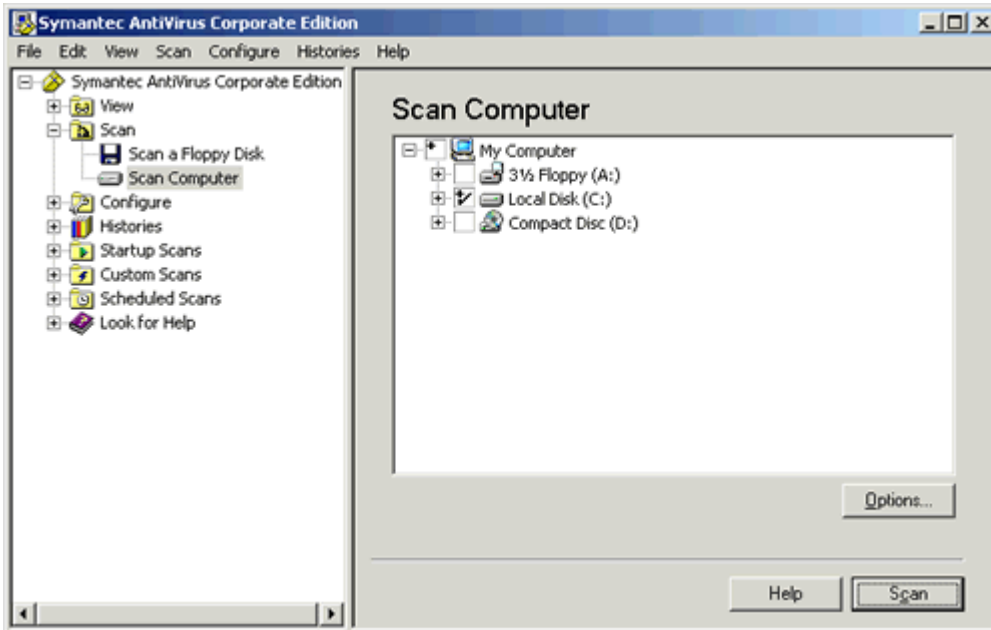

**Note: On Windows 98 systems when the screen below appears click Yes.*

Scan Hard Drive

Note: After installing **Symantec AntiVirus** and **LiveUpdate**, you should scan your hard drive(s) to detect and remove any viruses that may already exist on your computer. Scans can take an hour or more.

11. Restart your computer.
12. Click on **Start | Programs | Symantec Client Security | Symantec AntiVirus Client**.
13. Click the **Scan** menu and select **Scan Computer**.
14. Select your **C:** drive and any other installed hard disk drives. Then, click **Scan**.

15. When the scan is completed, close the **Scan Computer** window by clicking the box in the upper right corner of the screen.
